Hydraulic Capacity	0%
Type of Biological Treatment	N/A

In the space below, list all violations within the past 12 months:

This facility is currently not constructed. No vioaltions within the last 12 months.

Other Wastewater System Information

Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC).

Use one of the following methods:

(a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.

(b) If no historical flow data are available, use:
ERC = (Total SFR gallons treated (Omit 000) / 365 days / 280 gallons per day)

For wastewater only utilities:

Subtract all general use and other non residential customer gallons from the total gallons treated. Divide the remainder (SFR customers) by 365 days to reveal single family residence customer gallons per day.

NOTE: Total gallons treated includes both treated and purchased treatment.

ERC	138
Method used:	(a)

What is the present system connection capacity (in ERCs *) using existing lines? 43,478

What is the future system connection capacity (in ERCs *) upon service area buildout? 86,957

Describe any plans and estimated completion dates for any enlargements or improvements of this system.

Planning for new screens and a belt press at Campus 1 is in-process currently. A third belt press will also be added at Campus 1 and will include a polymer system to add capacity and redundancy to the system. A local power supply will also be considered as part of the project. Due to new development, a new lift station and force main will be added to the collections system. The lift station will include a concrete vault and submersible pumps and the force main will consist of approximately 500 linear feet of 6" pipe.

If the utility uses reuse as a means of effluent disposal, attach a list of the reuse end users and the amount of reuse provided to each, if known.

Cobblestone 36.060 MG; Copper Sky 53.493 MG; Clennwilde/City of Maricopa 98.886 MG; Homestead 73.304 MG; Meadows 83.578 MG; Province 185.388 MG; Rancho El Dorado III 124.836 MG; Rancho Mirage 40.752 MG; Sorrento 40.320 MG; Tortosa 47.263 MG; Villages 43.732 MG; U of A MAC 59.196 MG.

If the utility does not engage in reuse, has a reuse feasibility study been completed? N/A

If so, when?

NA - Utility does reuse effluent.

Other Wastewater System Information

Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC).

Use one of the following methods:

(a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.

(b) If no historical flow data are available, use:
ERC = (Total SFR gallons treated (Omit 000) / 365 days / 280 gallons per day)

For wastewater only utilities:

Subtract all general use and other non residential customer gallons from the total gallons treated. Divide the remainder (SFR customers) by 365 days to reveal single family residence customer gallons per day.

NOTE: Total gallons treated includes both treated and purchased treatment.

ERC	N/A
Method used:	Other

What is the present system connection capacity (in ERCs *) using existing lines? N/A

What is the future system connection capacity (in ERCs *) upon service area buildout? 6

Describe any plans and estimated completion dates for any enlargements or improvements of this system.

The water reclaimation facility is being recommissioned and is anticipated to being treating wastewater in late 2024 or early 2025.

If the utility uses reuse as a means of effluent disposal, attach a list of the reuse end users and the amount of reuse provided to each, if known.

Currently a vault and haul process is in place so no effluent water is being generated.

If the utility does not engage in reuse, has a reuse feasibility study been completed? Yes

If so, when?

Reuse and recharge are being designed for this system.

Other Wastewater System Information

Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC).

Use one of the following methods:

(a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.

(b) If no historical flow data are available, use:
ERC = (Total SFR gallons treated (Omit 000) / 365 days / 280 gallons per day)

For wastewater only utilities:

Subtract all general use and other non residential customer gallons from the total gallons treated. Divide the remainder (SFR customers) by 365 days to reveal single family residence customer gallons per day.

NOTE: Total gallons treated includes both treated and purchased treatment.
