**Other Wastewater System Information**

**Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC).**

Use one of the following methods:

- (a) If actual flow data are available from the preceding 12 months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:  
$$ERC = ( \text{Total SFR gallons treated (Omit 000)} / 365 \text{ days} / 280 \text{ gallons per day} )$$

For wastewater only utilities:

Subtract all general use and other non residential customer gallons from the total gallons treated. Divide the remainder (SFR customers) by 365 days to reveal single family residence customer gallons per day.

**NOTE:** Total gallons treated includes both treated and purchased treatment.

ERC   
Method used:

What is the present system connection capacity (in ERCs \*) using existing lines?

What is the future system connection capacity (in ERCs \*) upon service area buildout?

Describe any plans and estimated completion dates for any enlargements or improvements of this system.

If the utility uses reuse as a means of effluent disposal, attach a list of the reuse end users and the amount of reuse provided to each, if known.

If the utility does not engage in reuse, has a reuse feasibility study been completed?

If so, when?
